WINCOMPLETE SETTING AND COMPARATIVE GENOMICS OF Shigella

RT flexneri serotype 2a strain 2457T.";

Infect. Immun. 71:2775-2786 (2003).

-1- FUNCTION: Catalyzes the phosphorylation of D-glycero-D-manno-heptose 7-phosphate at the C-1 position to form D,D-heptose-1,7-

C heptose 7-phosphate at the ADP transfer to D-glycero-D-manno-heptose

1-phosphate, yielding AND-D,D-heptose (By similarity).

C -1- CATALYTIC ACTIVITY: ATP + D-glycero-beta-D-manno-heptose 1-

phosphate = ADP + D-glycero-beta-D-manno-heptose 1-

phosphate = diphosphate + ADP-D-Jlycero-beta-D-manno-heptose 1-

phosphate: The CTIVITY: ATP + D-glycero-beta-D-manno-heptose 1-

PATHWAY: Inner core lipopolysaccharide biosynthesis; ADP-L-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              glycero-beta-D-manno-heptose biosynthesis; second step.
PATHWAY: Inner core lipopolysaccharide biosynthesis; ADP-L-
glycero-beta-D-manno-heptose biosynthesis; fourth step.
SIMILARITY: In the N-terminal section; belongs to the carbol
kinase pfkB family.
SIMILARITY: In the C-terminal section; belongs to the
cytidylyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            98

                                                                                                                                                                                                                                                                                                                                                                                                                                          bisphosphate (By similarity).

bisphosphate (By similarity).

rUNCTION: Catalyzes the ADP transfer to D-glycero-D-manno-heptose (By similarity).

l-phosphate, yielding ADP-D,D-heptose (By similarity).

cATALYTIC ACTIVITY: ATP + D-glycero-beta-D-manno-heptose 7-phosphate = ADP + D-glycero-beta-D-manno-heptose 1.

cATALYTIC ACTIVITY: ATP + D-glycero-beta-D-manno-heptose 1.

phosphate = diphosphate + ADP-D-glycero-beta-D-manno-heptose.

phosphate = diphosphate + ADP-D-glycero-beta-D-manno-heptose biosynthesis; ADP-L-glycero-beta-D-manno-heptose biosynthesis; ADP-L-glycero-beta-D-

Blotechnol. 21:1307-1313(2003).

-i- FUNCTION: Catalyzes the phosphorylation of D-glycero-D-manno-heptose 7-phosphate at the C-1 position to form D,D-heptose-1,7-bisphosphate (By similarity).

-i- FUNCTION: Catalyzes the ADP transfer to D-glycero-D-manno-heptose 1-phosphate, yielding ADP-D,D-heptose (By similarity).

-i- CATALYTIC ACTIVITY: ATP + D-glycero-beta-D-manno-heptose 1-phosphate = ADP + D-glycero-beta-D-manno-heptose 1-phosphate = ADP + D-glycero-beta-D-manno-heptose 1-phosphate = ADP + D-glycero-beta-D-manno-heptose 1-phosphate = ADP+D-glycero-beta-D-manno-heptose 1-phosphate = ADP-D-glycero-beta-D-manno-heptose.
-i- PATHWAY: Inner core lipopolysaccharide biosynthesis; ADP-L-glycero-beta-D-manno-heptose.
-i- PATHWAY: Inner core lipopolysaccharide biosynthesis; ADP-L-glycero-beta-D-manno-heptose biosynthesis; Fourth step.
-i- SIMILARITY: In the N-terminal section; belongs to the carbohydrate kinase pikB family.
-i- SIMILARITY: In the C-terminal section; belongs to the cytidylyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         25-OCT-2004 (Rel. 45, Last sequence update)

RY Tidentification, cloning and characterization of rfag of ridentification, 

RY Inpoplotyses the phosphorylation of D-glycero-D-manno-heptose -1,7-cc heptose 7-phosphate (probable).

CC -I-FUNCTION: Catalyzes the ADP transfer to D-glycero-D-manno-heptose 7-cc -1-phosphate (probable). Phosphose (Probable).

CC -I-CATALYTIC ACTIVITY: ATP + D-glycero-beta-D-manno-heptose 1,7-bisphosphate.

CC -I-CATALYTIC ACTIVITY: ATP + D-glycero-beta-D-manno-heptose 1-phosphate = diphosphate + ADP-D-glycero-beta-D-manno-heptose.

CC -I-PATHWAY: Inner core lipopolysaccharide biosynthesis; ADP-L-cc glycero-beta-D-manno-heptose biosynthesis; ADP-L-cc -I-PATHWAY: Inner core lipopolysaccharide biosynthesis; ADP-L-cc -I-CXIMILARITY: In the N-terminal section; belongs to the carbohydrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Q8GLÜ7;

```
-I-FUNCTION: Catalyzes the phosphorylation of D-glycero-D-manno-heptose 7-phosphate at the C-1 position to form D,D-heptose-1,7-bisphosphate (Probable).

-I-FUNCTION: Catalyzes the ADP transfer to D-glycero-D-manno-heptose 1-phosphate, yielding ADP-D,D-heptose (Probable).
-I-CATALYTIC ACTIVITY: ATP + D-glycero-beta-D-manno-heptose 7-phosphate = ADP + D-glycero-beta-D-manno-heptose 1-phosphate = ADP + D-glycero-beta-D-manno-heptose 1-phosphate = diphosphate + ADP-D-glycero-beta-D-manno-heptose 1-phosphate = diphosphate + ADP-D-glycero-beta-D-manno-heptose 1-glycero-beta-D-manno-heptose biosynthesis; ADP-L-glycero-beta-D-manno-heptose biosynthesis; ADP-L-glycero-beta-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE-9535630; PubMed-7542800;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
